Oil Well Records in McKean and Elk Counties, Pennsylvania.

BY CHAS. A. ASHBURNEE, M.S. ASSISTANT GEOLOGICAL SURVEY.

(Read before the American Philosophical Society, August 16, 1878).

The demand for accurate well records in the northern oil field has become very great, from the eagerness with which the producers have sought to find petroleum, outside of the limits of the Bradford development. Most of the explorers, from the way in which their wells are drilled by contractors, are unable to keep a complete and correct record of the rocks through which the drill passes, yet they are ever anxious to procure reliable records from other sources to aid them in their "wild cat" operations.

During the past two years I have been able to obtain through the assistance of Mr. M. M. Schultz of Wilcox, a number of extremely valuable and interesting records of wells drilled in the vicinity of that village. Mr. Schultz by his untiring perseverance has succeeded in getting records of no less than six wells drilled to an average depth of over eighteen hundred fect. All have been kept with the greatest care and most of them under his personal supervision.

No complete register of all the rocks passed through by the drill has ever been kept by any of the producers in the Bradford oil field. In December, 1877, Prof. Lesley appointed Mr. Arthur Hale, of the Survey, to the special work of obtaining a correct record of the Dennis & Co.'s Well, No. 1, which was about to be drilled on the high summit to the south-west of Bradford.

All of these records together with a more minute description and fuller discussion of the rocks drilled through, will be found in my forthcoming report of progress in McKean and Elk Counties. I have been induced to communicate to the Society a few of the more valuable well records for immediate reference prior to the publication of the report.

The position of the Olean Conglomerate above the mouth of each well is given in feet in order that a comparison may be made between the several sections. All the rocks of the section are not named for reasons which can be better appreciated when the report is published.

The Olean Conglomerate is the bottom of the Coal Conglomerate No. XII, or Millstone grit. The Bradford oil producing sand belongs without question to the Chemung Period, or the upper part of No. VIII.

C. W. Dennis & Co.'s Well, No. 1.

Owned by C. W. Dennis & Co., situated on the Roger's farm, threefourths of a mile south 35° west of Bradford, Bradford Township, McKean County.

The record of this well was kept by Mr. Arthur Hale, aid to Mr. John F. Carll, Assistant Second Geological Survey of Pennsylvania.

The well was drilled in December 1877, and January 1878. Mr. Hale made the measurements with great accuracy, the method pursued, to-

PROC. AMER. PHILOS. SOC. XVHI. 102. B. PRINTED NOV. 21, 1878.

Ashburner, J

gether with a fuller description of the facts obtained, will be published in the District report.

It is due Mr. Hale to state that the Dennis record is, without doubt, the longest *detailed and accurately measured* record of any oil well in the United States. Deeper wells have been drilled, but no record has ever been kept so accurate as this one to such a depth. Wherever the rock passed through by the drill was found to change a specimen was secured; in many cases a number of specimens of the same stratum were kept, in order that after a more careful study the horizons or divisions might be shifted the better to agree with the true succession of the strata.

I hope to deposit a duplicate series of specimens in the museum of the Philadelphia Academy of Natural Sciences, and it is hoped that duplicates may be deposited in other museums throughout the States. In view of this fact, I have given below the numbers of the specimens obtained of each stratum. The elevation of the top of the well above Ocean in fect is 2055. The elevation of the Bradford Station of the Bradford Branch of the Erie Railway being 1444 feet

Slate and S. S.; spec. 311

The top of the ridge directly above the Dennis Well, No. 1, is capped by the Sub-Olean Conglomerate, which lies from 50 to 70 feet below the bottom of the Olean Conglomerate; the top of the well is about 115 feet below this latter horizon.

The sandstone and conglomerate which caps the summits surrounding Bradford, and which is found broken up in large masses on the hill slopes, comes from the Olean Conglomerate.

Kinzua Well or "Dry Hole," P. C. L. and P. Co.

Owned by the Producers Consolidated Land and Petroleum Company of Bradford, situated on Kinzua Creek, near the mouth of Glad run, in warrant 3122, Hamlin Township, McKean County, and about five miles northeast of Kane. The land upon which this well is located together with the adjoining tracts are part of those originally belonging to the "McKean and Elk Land and Improvement Co.," General Thomas L. Kane, Supt.

The well was drilled in the Spring of 1877, and the record was furnished by Mr. L. C. Blakeslee, Superintendent P. C. L. and P. Co.

The elevation of the top of the well, as determined by Mr. J. W. Murphy of Wilcox, is 52 feet higher than Wilcox Well, No. 3, or 1718 feet above Ocean.

Mr. Blakeslee reports that no "good show" of oil was found. A small gas vein was struck, position not stated. Elevation of the bottom of the Olean Conglomerate on the P. & E. R. R. four miles due south-west from the Kinzua Well is 1868 feet. The calculated elevation of the same horizon at the well is 1900 feet.

Wilcow Well, No. 2, or Schultz Gus Well.

Owned by M. M. Schultz & Co., situated on the west branch Clarion River, in warrant 2676, Sergeant Township, McKean County, and five miles north of Wilcox, a station on the Philadelphia and Eric Railroad, 104 miles east of the City of Eric. This well is 855 feet south, 17 degrees 30 minutes west, of Wilcox Well, No. 1, or the old Adams Well,* which was drilled in 1864. (?)

Drilling on this well was commenced about the first of the year (1876) and completed in the latter part of August of the same year. After the drilling was completed to a depth of 2004 feet, an "oil saver" was attached to the iron casing ($5\frac{4}{5}$ inch), and the gas issuing from the well was conveyed through a two inch pipe and discharged about two feet above the surface of the water, which partially filled the 250 barrel tank which had been erected. Sufficient oil was passed to show itself as a scum on the surface of the water.

Mr. Schultz conceived the idea of inserting into the well to a depth of 2000 feet, an inch pipe, and by closing the mouth of the casing to utilize the pressure of the gas to force the oil out through the inch tubing.

Mr. Schultz believed that the bulk of the oil which was found in the well was coming from the sand extending from 1795 to 1815 feet, in which the drillers reported that they had "struck" a small quantity of heavy green oil. In this event the immense volume of gas which was issuing from a depth of 1776 feet might more than counterbalance in its pressure the pressure of the oil from a lower horizon, and thus prevent it from filling the hole.

After the tubing was adjusted and the gas confined in the well as much

* For a complete record of this well, see a paper by Prof. Lesley in the Proceedings of the American Philosophical Society, Vol. X, page 238; also one in the Petroleum Monthiy of a later date. A description of a very interesting action of this well is given in a paper named "Description of the Wilcox Spouting Water Well," which I read before the Society, Sept. 21, 1877.

Ashburner.)

as two to three barrels were forced out. Mr. Schultz thinks that the tubing during this time must have been entirely filled with oil to the exclusion of gas. In this case the pressure of the gas must have been sufficient to raise a column of oil one square inch in section and 2000 feet high. Of course, such an enormous pressure could only be temporary. The oil flowed from the tubing but for a few moments, the gas then probably became thoroughly mixed up with the oil which from its low temperature quickly congealed and effectually choked the pipe. After a few hours the gas ceased to flow entirely from the well and also from the adjoining well, No. 1. The gas commenced to flow again with greater energy after 36 hours of inactivity, from both wells, Nos. 1 and 2.

In the early part of 1877, the pressure of the gas seemed to increase suddenly. About the middle of May, four months after, the gas from both wells, Nos. 1 and 2, ceased to flow for the second time without any obstruction having been knowingly placed in its way. No gas was found to come from either well till July 14th, when it commenced to flow again. Up to the present time the amount of gas increases and diminishes at irregular intervals. The gas from this well was used as fuel in drilling well, No. 3.

The elevation of Wilcox Well, No. 2, is 1642 fect above Ocean on the corrected datum of the P. & E. R. R. which makes Wilcox Station 1527.*

Wilcox Well, No. 3, or "John's Well,"

Owned by M. M. Schultz & Co., and situated 1782 feet north 73 degrees 30 minutes west of well No. 2.

The well was commenced in the early part of October, 1876, and completed to a depth of 1850 feet about the middle of June, 1877.

After the well had been drilled to a depth of 1720 feet, tubing was inserted to a depth of 1684 feet, and it was reported that the well produced, by pumping, a barrel a day for about six months, when it was decided to drill deeper. The tubing was drawn, and after losing the tools several times, drilling was finally abandoned at a depth of 1850 feet.

The elevation of the top of the well is 1666 fect above Ocean ; Wilcox Station being 1527 feet above the same datum.

This well was tube. I about the first of the year, and has since been pumped continuously every other day. Its average daily production is reported to be a barrel and a-half.

The Olean Conglomerate is not exposed in the vicinity of the Wilcox Wells, the lower horizon is probably 125 feet above the mouth of Wilcox Well, No. 2.

No. 3 as well No. 2, allowing for the difference in elevation of the two wells.

Ernhout and Taylor Well, No. 1.

Owned by Capt. John Ernhout and Frank Taylor, Esq., on north side of Wilson Run, near south-east corner of warrant 3218, Jones Township, Elk County, and about $3\frac{3}{4}$ miles north-west of Wilcox and several hundred feet north of the P. & E. R.R. The tract upon which this well is located is owned by D. Scull, Jr., Esq., of Philadelphia. Drilling was commenced Jan. 15, 1878, and abandoned March 13, when the tools were lost at a depth of 1335 fect. It is expected after the tools shall have been recovered, that the well will be drilled deeper.

Record reported by Mr. M. M. Schultz. Elevation of well, determined by Mr. A. W. Sheafer, Aid, McKean District, 1645 feet (Bar).

by Mr. A. W. Shealer, Ald, MCKean District, 1645 leet (Bar).

1878.]

The position of the bottom of the Olean Conglomerate above the Ernhout and Taylor Wells has not yet been determined.

A comparison may be made between these sections and the records of the Wilcox Wells by means of the red shale bands.

Ernhout and Taylor Well, No. 2.

Owned by Ernhout and Taylor, and situated in the south eastern corner of warrant 3215, Wetmore Township, McKean County, about one mile north of well No. 1. Tract formerly part of McKean and Elk Land and Improvement Co.'s lands.

Drilling commenced March 12, 1878, mineral water "vein" struck at a depth of 1990 feet May 9. The well was afterwards drilled 10 feet deeper through a dark fine (coffee grounds) sand strongly impregnated with oil. Oil not having been found in this well in paying quantities the casing was drawn, and water from the fresh water "veins" permitted to flow into the hole. The gas threw out of the well water, at regular intervals, to a height of 125 feet, more or less.* Shortly after the casing was drawn, a wooden plug was inserted into the upper part of the well and partially filled the hole. After this was done the well sponted every eleven minutes, the eruption lasting for two minutes. The column of water and gas rises above the top of the derrick (70 feet), and after several pulsations falls and almost ceases to spout, when it suddenly rises again repeating the action, and vanishing entirely at the end of two minutes.

Record reported by Mr. M. M. Schultz. Elevation of well determined by Mr. Sheafer, 1730 feet (Bar).

Bear Creek Well, or "Dry Hole," P. C. L. and P. Co.

Owned by the Producers' Consolidated Land and Petroleum Company, of Bradford. Situated on Bear Creek, east side of County road between Wilcox and Ridgway, in warrant 3257, Jones Township, Elk County. Land leased from Wilcox Tauning Company.

^{*} Drilling was commenced about April 1, 1878, and was completed in from 50 to 60 days.

The record was reported by Mr. M. M. Schultz. No show of oil was found.

The elevation of the top of the well is 1595 feet (Bar.) above ocean.

Drillers reported '' oil smell '' in sand from 1706 to 1756/		

The Olean Conglomerate in this locality varies very much in its character. It is found changing from a coarse pebble conglomerate to a rather fine or even shaly sandstone in comparatively short distances. The "blue slate rock" directly under the drift in the Bear Creek well, represents probably a portion of the Olean Conglomerate.

Silver Creck Well or "Dry Hole." Burton and Wallace.

Owned by Messrs. Burton and Wallace, of Rynd Farm, situated on Silver Creek, west side of County road, between Wilcox and Ridgway, in warrant 3261, Ridgway Township, Elk County. Land leased from Wilcox Tanning Company.

Drilling was commenced about the same time as at the Bear Creek Well, and was completed June 26, 1878.

The record was reported by Mr. M. M. Schultz. No show of oil was found.

The elevation of the top of the well is 1615 feet (Bar.) above ocean.

Smell of oil reported in sand	

The Olean Conglomerate is probably represented in the record by the sand from 30 to 85 feet below the top of the well.

The records of the Bear Creek and Silver Creek Wells are invaluable as having a direct bearing upon the probable existence of petroleum to the south and south-east of Wilcox.

It will be noticed that the mass of the red rocks are some 300 feet lower in the the Bear and Silver Creek Wells than in the Wilcox Wells, estimating from the bottom of the Olean Conglomerate.

The question as to whether the mass of red bands in the two localities are the same and whether the strata included between them and the Olean have thickened to the south and south-east, is extremely suggestive.

NOTE.—The records are published just as they have been reported to me. I have not even altered the phraseology, which is quite different in a number of places where the same idea was evidently intended to be conveyed.

I will merely add, for those who are unacquainted with the terms employed by the drillers, that "shell" means any hard stratum encountered in the well, and not, as might be supposed, a fossil.

Nature's Reforesting. By Eli K. Price.

(Read before the American Philosophical Society, September 20, 1878.)

The paper on *Sylviculture* read in November and December, 1877, has produced the following confirmatory letters of views therein expressed. They are from the present Chief Justice of Pennsylvania, who lives in Beaver, and the Professor of Botany in the University of Pennsylvania, formerly a resident of Mifflin County, Pennsylvania.

CONTINENTAL HOTEL, FEBRUARY 11, 1878.

MY DEAR SIR:—I have read the address you sent me on *Sylciculture* with great interest, especially as some of its facts have come under my own observation. The western part of Pennsylvania was once among the best wooded portions of it, yet the destruction of timber has plainly affected
